

Auto-Publish Your Content

Let Holler & Pony post for you — across every platform

Howdy, Boss. Writing the post is half the job — *getting it out the door* is the other half. This wires Holler and Pony to actually publish and schedule your content across every platform, so you stop copy-pasting captions forever. And nothing goes out without your OK. Let's goooooo!

1. What this gets you

LindaAI can publish or schedule posts to X, LinkedIn, Instagram, Facebook, TikTok, YouTube, Threads, Pinterest, and more — to one platform or all of them at once. Draft a week of content with `/content-batch`, then let Holler schedule the whole calendar.

2. Why Postiz

We publish through **Postiz** — an open-source social scheduler that connects all your accounts in one place and hands LindaAI a clean API. Cloud or self-hosted, your call.

3. What you'll need

- A **Postiz** account (cloud at postiz.com, or self-hosted)
- Your social accounts connected inside Postiz
- 5 minutes

4. Get your Postiz API key

1. In Postiz, go to **Settings Public API**
2. Copy your **API key**
3. Note whether you're **cloud** (<https://api.postiz.com/public/v1>) or **self-hosted** (your domain + `/public/v1`)

5. Connect it to LindaAI

In Claude Code, tell LindaAI:

"Set up social publishing with Postiz"

Linda drops your API key into the publishing engine and confirms it can see your connected channels.

6. Post something

Just talk to your crew:

- *"Holler, post this to X and LinkedIn right now: [your text]"*
- *"Holler, schedule this for 9am tomorrow on Instagram"*
- *"Pony, blast this week's content calendar across all platforms"*

7. The approval gate

By default, **approve-before-send is ON**. Before anything publishes:

1. Linda shows you the post + which channels + when
2. You approve (in the terminal or from your phone via Telegram)
3. Only then does it go live

Want it fully automatic for routine posts? You can flip approval off — but we recommend keeping the gate on. You're the Boss; your name's on every post.

8. Pairs great with

- `/content-batch` — draft a week of posts in one shot, then schedule them all
- `/broadcast` / `/social-media-calendar` — plan the calendar, Holler fills it
- `/content-repurpose` — turn one video into 10 posts, then auto-publish the set

9. Troubleshooting

- **"No channels found"**? Connect your social accounts inside Postiz first.
- **Wrong base URL?** Cloud uses `api.postiz.com`; self-hosted uses your own domain.
- **Post didn't go out?** Check the approval step — nothing publishes until you say yes.
