

Chat From Your Phone

Talk to LindaAI over Telegram — from anywhere

Howdy, Boss. This is the one that changes the game: LindaAI in your pocket. Text your crew from the truck, the lot, the closing table — and they go to work on your machine back home. Let's wire it up.

1. What this gets you

Once connected, you can message LindaAI from the Telegram app on your phone and get full access to your agents — deal analysis, content, inbox summaries, the works — without touching your computer. Linda runs headless on your Mac and texts you back.

2. What you'll need

- The **Telegram** app (free, on your phone)
- 5 minutes
- Your LindaAI install open on your computer

3. Create your bot

1. In Telegram, search for **@BotFather** (the official Telegram bot maker)
2. Send `/newbot`
3. Give it a name (e.g. "My LindaAI") and a username ending in **bot**
4. BotFather hands you a **token** that looks like `123456:ABC-DEF1234...`
5. Copy that token somewhere safe — it's the key to your bot

4. Get your chat ID

1. Search for **@userinfobot** in Telegram and start it
2. It replies with your **numeric chat ID** (e.g. `123456789`)
3. Copy that number — it tells Linda which chat is *yours* so only you can reach her

5. Connect it to LindaAI

In Claude Code, just say:

"Run the Telegram setup" (or `/telegram-setup`)

LindaAI will ask for your **bot token** and **chat ID** from the steps above, drop them into your config, and start the bridge. That's it.

6. Test it

1. Open your bot in Telegram
2. Send **"Howdy"**
3. LindaAI replies from your machine — you're live

7. What you can do from your phone

- *"Bandit, pull comps on 1234 Oak St"*
- *"Sheriff, what's urgent in my inbox?"*
- *"Drawl, write me a Facebook ad for the duplex"*
- *"Tally, how's my pipeline looking?"*

Anything you can do at the keyboard, you can do by text.

8. Keep it running

The bridge runs on your computer. As long as your Mac is on and LindaAI is running, your phone line stays open. If it goes quiet, just restart the bridge with `/telegram-setup` or ask Linda to "restart the Telegram bridge."

9. Troubleshooting

- **No reply?** Make sure your computer is on and the bridge is running.
- **"Unauthorized"?** Double-check the bot token was pasted with no extra spaces.
- **Wrong chat?** Confirm your chat ID matches the one @userinfobot gave you.
