

Let Linda Text People

Outbound & two-way SMS through GoHighLevel

Howdy, Boss. This is how Linda runs conversations by text — sellers, buyers, leads, customers — right through your own phone number, with you approving every send. Think of it as your AI transaction coordinator that never sleeps.

1. What this gets you

Linda can read texts coming into your business number and draft smart, on-brand replies.

You approve them on your phone, and Linda sends. Use it for:

- **Transaction coordination** — keep buyers/sellers updated through closing
- **Seller lead follow-up** — qualify and nurture motivated sellers
- **Customer support** — answer questions, book calls, convert trials

You stay in control: **nothing sends without your approval.**

2. Why GoHighLevel

We use **GoHighLevel (GHL)** because it gives you four things out of the box: a phone number, carrier registration (A2P 10DLC), a CRM that tracks every conversation, and workflows that hand messages to Linda. If you already run GHL, you're most of the way there.

3. What you'll need

- A **GoHighLevel** sub-account (your own or your agency's)
- Your number registered for **A2P 10DLC** (Settings Phone Numbers Trust Center — usually already done if you text from GHL today)
- 10 minutes

4. Grab your GHL credentials

In your GHL sub-account, go to **Settings API / Private Integrations**:

1. Create a **Private Integration Token** with these scopes:

- `conversations.readonly`, `conversations.write`
- `conversations/message.readonly`, `conversations/message.write`
- `contacts.readonly`

2. Copy your **Location ID** (your sub-account ID)
3. Note the **phone number** GHL texts from

5. Connect it to LindaAI

In Claude Code, tell LindaAI:

"Set up SMS texting through GoHighLevel"

Linda will ask for your **Private Integration Token**, **Location ID**, and **from-number**, plus your **Telegram** details (so approvals come to your phone). She wires the bridge and points your GHL workflow at it.

6. Set the approval gate

By default, **approve-before-send** is **ON**. When a contact texts in:

1. Linda reads the conversation and drafts a reply
2. You get a Telegram ping: *"Approve & Send? "*
3. Tap **Approve** the text sends from your number

Tap **Edit** to tweak it first, or **Reject** to skip it. You're always the Boss.

7. Open a deal so Linda runs it

For transaction coordination, tell Linda the deal details (property, parties, your TC name). Linda tracks the deal through its milestones — intro, inspection, appraisal, title, financing, clear-to-close, and the closing-day congrats + feedback ask.

8. Safety rails (built in)

- Never quotes a price or contract term that isn't in the deal file
- Never gives legal or tax advice — flags it to you instead
- Flags anything sensitive (complaints, disputes, backing out) for your eyes
- Never sends without your approval

9. Troubleshooting

- **Texts not arriving?** Confirm your GHL workflow points to the bridge and your number is A2P-registered.
- **Approvals not reaching your phone?** Re-check your Telegram bot token + chat ID.

- **Send failed?** Linda tells you in Telegram with the reason so you can retry.
