

Turn On Voice

Let LindaAI talk back to you

Howdy, Boss. Reading's fine — but hearing your crew talk back hits different. Flip on voice and LindaAI speaks every response out loud. Great for hands-free mornings, the truck, or just because it's cool.

1. What this gets you

With voice on, LindaAI speaks her responses out loud through your computer using a built-in voice hook. Toggle it on and off whenever you want — no setup headaches.

2. Turn it on

In Claude Code, just say one of these:

- `/voiceon` — turn voice ON
- `/voice on` — same thing
- *"Start talking to me"*

LindaAI flips the voice hook on and confirms. From here, every response gets spoken.

3. Turn it off

When you need quiet:

- `/voiceoff` — turn voice OFF
- *"Mute" / "Stop talking" / "Quiet"*

Or just `/voice` by itself to flip the current state.

4. Fine-tune it

- **Speed:** *"Speed up the voice" / "slow the voice down"* (`/voicespeed`)
- **Pause / resume:** `/voicepause` and `/voiceplay`
- **Save a clip:** `/voicesave` to keep an audio file of a response

5. Good times to use voice

- **Morning briefing** — run `/morning-briefing` with voice on and listen while you get ready
- **Driving** — pair it with your Telegram phone bridge for true hands-free

- **Deal reviews** — hear the numbers read back to you

6. Troubleshooting

- **No sound?** Check your computer's volume and output device.
- **Voice won't toggle?** Ask Linda to "check the voice hook status."
- **Too chatty?** Voice speaks every response — flip it off with `/voiceoff` anytime.
